

ABOUT

I consider myself as a full stack javascript developer. Mainly I'm experienced in web-oriented, large-scale applications. Last 2+ years biggest part of my projects were high load applications. I prefer to plan both backend and frontend parts architectures before diving deep into the coding, but the rule of thumb is using of node.js. Since I'm focused on a language, (javascript) it doesn't matter to me much which framework suppose to be used on a project, though I prefer vanilla JS, I have a plenty of experience with all latest JS frameworks. I'm a follower of TDD pattern and prefer to use mocha, chai and sinon for testing. While writing my code I use different automation tools, such as: webpack, gulp, grunt. I can work both, with a team and as a stand alone developer.

WORK EXPERIENCE

10.2014 - PRESENT. REAKTIVATE.
Full Stack Web Developer
